

Robust, central network visibility management system from **SMVData**. **SMV-CM** enables the configuration and management of distributed network visibility entities from a single location.

Network visibility is a crucial component of any network, enabling security, monitoring and performance tools to function properly. **SMVData** offers comprehensive visibility solutions that provide high scalability, low cost and support virtualized environments of emerging data centers and 5G networks.

**SMV-CM** enables network operations, security and compliance teams to manage all of their network visibility entities from a single management system.

**SMV-CM** was designed from the ground up to support multiple use cases, multiple departments (e.g. security, Operations, compliance) and a single point of control for a widely distributed visibility solution.

### Customer statement

“**SMV-CM** is by far the most intuitive and easy to use management system I’ve seen from any networking vendor.”

# PRODUCT KEY FEATURES

- Configuration
- Management
